# 1. Introduction

A data dictionary is a collection of metadata such as object name, data type, size, classification, and relationships with other data assets. It is used by data administrators, analysts, and engineers to understand and trust data assets. It helps in the creation of authentic, transparent, and consistent data throughout the organization.

In this data dictionary, following servers are chosen for documentation:
Mongo 8.2 (MongoDB)

For each server, definitions of tables (entities/collections), views, functions are listed in order. Detailed properties of data elements (data type, size, nullability, optionality, indexes, foreign keys, constraints) are organized in tabular format.

# 2. Server: Mongo 8.2 (MongoDB)

Version: 8.2.6

1 database is listed below.

## 2.1. Database: VideoGame_Othli_Xicotli

Database objects to be listed: 3 collections

### 2.1.1. Collections

#### 2.1.1.1. Collection: promociones

##### Validation

Validator Type: JSON Schema

| Pos | Name | BSON Type | Required | Title | Description |
|---|---|---|---|---|---|
| 1 | clave | string | ✓ | Clave | Identificador único asignado a cada registro dentro de una tabla. Este campo permite diferenciar un registro de otro y asegurar la integridad de los datos. Generalmente corresponde a la clave primaria y puede estar compuesto por uno o más atributos, los cuales no deben repetirse ni contener valores nulos. |

### 2.1.1.2. Collection: ticket_soporte

#### Validation

Validator Type: JSON Schema

| Pos | Name | BSON Type | Required | Title | Description |
|---|---|---|---|---|---|
| 1 | usuario | string | ✓ | Nickname del jugador | Identificador digital único y personalizado que representa a una persona, marca o personaje en redes sociales, juegos y plataformas en línea. |

### 2.1.1.3. Collection: valoraciones
